

nature all

Durable, eco-friendly lime-based paint

INTERIOR & EXTERIOR

Traditional qualities, modern science...
Nature-all lime-based paint combines the best of both
to enhance your home with an ever-hardening,
durable and attractive finish that is kind to the environment.

Technical Data Sheet

Nature-all is a traditional paint finish with different characteristics to modern paints, so it needs to be applied in a different way. Nature-all is a calcium hydroxide suspension in water. As the water evaporates, the calcium hydroxide readily combines with carbon dioxide in the atmosphere to form calcium carbonate. This process is carbonation. As carbonation takes place, Nature-all hardens and bonds to the substrate. After application Nature-all will leave the surface vapour-permeable and will not trap moisture in the substrate, allowing the surface to breathe.

Preparation

Surfaces should be washed and cleaned to remove dust and loose particles. New surfaces should be allowed to dry and cure properly. Any organic growth should be treated with suitable biocide or fungicide (such as a weak bleach solution) which should be rinsed off. Dampen the surface with clean water before applying Nature-all

Application

Apply Nature-all to the substrate with a suitable long-haired paintbrush using horizontal, vertical and diagonal strokes. Apply evenly and keep a wet edge, making sure Nature-all is well worked into the surface. Spread Nature-all evenly and thinly. Thick coats will crack when they dry. Allow the first coat to dry for at least 24 hours. Dampen the area before each coat. More than 2 coats may be necessary to get the required finish. One litre of Nature-all will cover 3 to 6 square metres, depending on the smoothness and porosity of the surface.

Create your own colours

Nature-all is supplied in white for interior and exterior application. You can however create your own beautiful shades by adding one of a range of pigments available from your dealer.

Safety

Calcium hydroxide is caustic. Always wear eye protection, protective gloves and clothing.

Advice and information is given in good faith. It is important that users of Nature-all satisfy themselves that they have chosen an appropriate product, have taken the necessary safety precautions and are using a suitably skilled workforce to handle the product.
